

## **ORGANIC-LOCK AGGREGATE PAVING**

Organic-Lock is the strongest and most erosion resistant natural binder available. Proven from years of research and testing, Organic-Lock greatly outperforms traditional psyllium husk binders. Organic-Lock provides a resilient surface that is self-healing, self-drying and self-wicking of water. Unlike psyllium based binders Organic-Lock can be used on steep slopes without fear of severe erosion. Another benefit of Organic-Lock is that weed growth or seed germination is vastly limited compare to other natural surfaces. Organic-Lock is patented and Gail Materials is an exclusive distributor. Organic-Lock is available in multiple colored decomposed granites and crushed aggregates all tested and approved by Gail Materials. Organic-Lock comes premixed with installation guidelines and consulting from the experience staff at Gail Materials.
